Problem 1

```
def under_attack(col, queens):
    left = right = col
    for r, c in reversed(queens):
        left, right = left - 1, right + 1

    if c in (left, col, right):
        return True
    return False
print 'This generation has {0} babies'.format(babies)
ttk.Button(buttonframe, width = 3,
            textvariable=guivars["%s_%s" % (current, item)],
            command=lambda: remoteButton(current, item))
```
